STATEMENT OF QUALIFICATIONS

BACKGROUND INFORMATION

Quality Testing and Engineering, Inc. (QTE) was founded by Michael A. Widman in April of 2000 to provide a wide variety of construction material testing, geotechnical engineering, and other development services. To better address the growing needs of clients, Mr. Jack Mutchler was hired in 2002 to manage the environmental, archaeological, and wetland consulting services.

The company soon gained a reputation for providing quality, timely service. Within two years of operation, QTE experienced substantial growth. This warranted additional professional staff. Mr. Wayne Smith, Soil Scientist Eric Marlinghaus, P.E., Construction Services Manager, and Chad Martens, Environmental Project Manager, joined QTE in 2002, 2003, and 2007 respectively. QTE's excellent reputation began to earn substantial recognition in Missouri resulting in the opening of QTE's regional office in Wentzville on March 1, 2006.

A dedicated professional staff and state-of-the-art technology assure QTE's ability to continue its tradition of premium service to clients. QTE technicians are ACI, MoDOT, and IDOT certified.

QUALITY COMES FIRST

Quality Testing and Engineering, Inc.'s staff is committed to three client-quality focused goals:

Meeting Client's Needs. Meeting a client's needs means more than testing within project contracts and specifications. QTE staff provides testing results as quickly as possible to avoid delays and additional costs. QTE professionals work personally with the project team and field staff to establish effective communication and ensure a quality end product.

Providing Timely Response. Projects are typically on a tight schedule, which require field and laboratory testing, analyses, and recommendations to be completed promptly. QTE personnel are dedicated to a quality and timely response.

Avoiding Costly Surprises. QTE professionals diligently search for conditions that could produce unexpected cost delays, redesigns, etc. Recommendations and alternative solutions are provided when unfavorable conditions are present.

You Deserve Quality

WWW.QTEINC.COM

Geotechnical Exploration

QTE explores the subsurface conditions to provide your design professionals with critical data for shallow and deep foundation design, ground improvement methods, seismic analysis, and flexible and rigid pavement design. **QTE** also performs global stability analyses of cut or fill slopes, which may include retaining walls. Our field staff has the experience and certifications to carry your project beyond the design phase and through construction.

Environmental Assessment/Archaeological Studies

QTE provides environmental consulting services to aid our clients in identifying and quantifying liabilities associated with environmental concerns. **QTE** will guide you through the complicated maze of environmental regulations that would otherwise stall or delay your project.

QTE will also assist you with understanding and complying with federal and state regulations pertaining to archaeological resources such as the National Historic Preservation Act (NHPA) or the National Environmental Policy Act (NEPA).

QTE also provides asbestos surveys and radon testing services to aid our clients in identifying potential health hazards and determining costs associated with abatement and mitigation.

Wetland Services

QTE has excellent working relationships with the U.S. Army Corps of Engineers (COE) and other state and federal agencies. Wetland services include delineations, wetland mitigation planning, monitoring, permit assistance, analysis of alternatives, water quality sampling and testing.

Construction Material Testing

QTE's core service is construction observation and testing of concrete, engineered fill, and asphalt paving. To ensure the quality you deserve, our field staff uses the latest generation of equipment to assist them in verifying compliance of your building materials. **QTE** maintains over twenty sets of IDOT approved concrete testing equipment, over twelve Humboldt nuclear densimeters, three self-contained mobile laboratories, as well as various COE approved density testing devices. All equipment is carefully maintained and properly calibrated. Our main laboratory is approved by AASHTO, CCRL, the State of Illinois, and the Army Corps of Engineers.

QTE welcomes the opportunity to speak with you about your project. We are confident that you will be impressed and satisfied with the quality of our work, the responsiveness of our staff, and our dedication to serve you, the client, for any of your geotechnical engineering, environmental consulting, construction materials testing needs and septic site mapping for individual wastewater systems.

Quality is the excellence of both the product and the service provided to our clients.

SERVICES

Our services are typically for industrial, commercial, institutional, governmental, municipal, or residential projects. Components of these projects may include:

Site Selection

- Archaeological studies
- Environmental assessments
- Asbestos surveys
- Radon testing
- Geotechnical evaluation
- Septic site suitability
- Soil evaluations
- Soils mapping
- Wetland services

Subsurface Exploration

- Contamination investigations
- Laboratory soil testing
- Test drilling or excavation

Project Development

- Corrective action plans
- Remediation services
- Groundwater management
- Groundwater monitoring
- Monitoring and testing during fill placement
- Observation of site preparation
- Site development recommendations
- UST management

Plan Review

- Compliance with governmental codes and regulations
- Compliance with reported requirements
- Coordination with design team

Construction Services

- Aggregate testing
- Asphaltic conventional and superpave testing/observation
- Concrete and asphalt coring
- Floor flatness testing
- Foundation excavation observations
- Fresh concrete testing/observation
- Hydraulic pull testing
- Masonry testing and structural observation
- Maturity testing of concrete
- Pavement evaluation
- Reinforcing steel inspection
- Spray on fireproofing inspection
- Structural steel inspection
- Subgrade stabilization recommendations and soil compaction
- Timber evaluation

ENVIRONMENTAL CONSULTING

Quality Testing and Engineering, Inc. provides environmental consulting services to our clients to identify and quantify liabilities associated with environmental concerns. **QTE** will then guide our clients through the complicated maze of environmental regulations that would otherwise stall or delay their projects. Environmental consulting services offered by **QTE** include:

- ❖ Phase One Environmental Site Assessments (ESAs)
- ❖ Phase Two – Site Characterization
- ❖ Design and Implementation of Corrective Action Plans
- ❖ Aquifer Testing and Containment Transport (Modeling)
- ❖ Groundwater Monitoring
- ❖ Well Design
- ❖ Underground Storage Tank (UST) compliance
- ❖ UST Decommissioning
- ❖ Regulatory Compliance
- ❖ Residential Radon Testing
- ❖ Asbestos Surveys

Typically, the initial phase of a project would involve an ESA. If a problem is identified, a Phase Two ESA or a more complete site characterization is performed. Site characterization includes determining the lateral extent, vertical extent, and type of contamination present and can include the following tasks:

- ❖ Soil Sampling
- ❖ Geophysical surveys
- ❖ Groundwater monitoring
- ❖ Analytical testing
- ❖ Waste characterization
- ❖ Groundwater modeling

Once site characterization is complete, QTE will work with the development plan to minimize cleanup work. For example, if an asphalt parking lot covers an area of contamination, the need for cleanup in that area is reduced. If remediation of soil or groundwater is necessary, QTE will evaluate and propose the most cost-effective technology. Corrective Action Plans (CAPs) are then developed based on extensive experience and direct communication with regulatory agency staff (as applicable). QTE personnel have prepared and implemented CAPs utilizing various remedial methods including:

- ❖ Excavation and disposal
- ❖ Air sparging systems
- ❖ Soil vapor extraction systems
- ❖ Groundwater recovery systems
- ❖ Bioremediation of both soils and groundwater
- ❖ Bioventing
- ❖ Bioaugmentation of both soils and groundwater
- ❖ Natural attenuation monitoring
- ❖ Free-phase product recovery systems
- ❖ Chemical treatment (Fenton's Reagent)
- ❖ Heavy Metal Stabilization

GEOTECHNICAL EXPLORATION

With decades of combined experience, our skilled team of geotechnical engineers, field staff, laboratory technicians, licensed geologists and certified scientist provide geotechnical services including field explorations, laboratory testing and foundation and site development recommendations.

QTE's geotechnical engineers are also trained to respond to a wide range of emergency situation soil-related issues including:

- Failure Analysis and Corrective Action Recommendations
- Soil Stabilization, Slopes and Sinkholes
- Retaining Walls and Foundations

LABORATORY TESTING SERVICES

QTE's laboratory is overseen by Wayne Smith, Soil Scientist, and Hobson Fizette P.E.. The full-time and part-time engineering technicians and are AASHTO accredited and validated by the USACE.

The benefits of choosing **QTE** to provide laboratory services include:

- Competitive Rates
- Ability to Meet Tight Deadlines
- Pickup/Drop-off Services

Soil Testing Services:

- Standard and Modified Proctor Testing (ASTM D 698/1557)
- Volume Change Tendencies Testing
- Consolidation Characteristics Testing
- Relative Density Testing
- California Bearing Ratio Testing
- Hydrometer Testing
- Soil pH Testing
- Permeability Testing
- Classification and Index Properties Testing
- Organic Content Testing
- Resistivity testing
- Direct Shear Testing
- Grain Size Analysis

CONSTRUCTION MATERIAL TESTING

Quality Testing and Engineering, Inc.'s (QTE) construction material testing staff have the knowledge and experience to handle a wide variety of building projects including healthcare, transportation, commercial, municipal and government facilities. Overseen by Eric Marlinghaus P.E., Construction Services Manager, the **QTE** staff has the extensive experience in providing services in accordance with all applicable governmental and site-specific specifications and regulations throughout the St. Louis Metro East. Our engineers and technicians are certified by MoDOT, IDOT, International Code Council (ICC), and the American Concrete Institute (ACI). **QTE** is a self-certified USACOE small disadvantaged business.

Construction Material Testing Services (but not limited to):

- Compressive Strength Testing
- Flexural Strength Testing
- Aggregate Characteristics
- Field Quality Control (Slump, Air, Temperature, Compressive Strength Samples, Retrieval)
- Concrete Batch Plant Inspections
- Soil Density
- Hot Mix Asphalt Density
- Coring
- Floor Flatness
- Floor Moisture
- Non-destructive in-place testing (Rebound Hammer)

Special Inspection Services

- Structural Masonry
- Reinforced Concrete
- Structural Steel Welding and Bolting
- Post-Tensioned Concrete
- Wood Frame Inspections

QTE's offices/laboratories in Missouri and Illinois staff eleven full-time and two part-time engineering technicians and are IDOT and MoDOT certified as well as validated by the USACE and AASHTO accredited for construction material testing.

REPRESENTATIVE CLIENTS

AAIC, Incorporated	Juneau Associates, Inc. P.C.
Alberici Constructors	Keller Construction Company
